

PRP

Single Treatment	\$750
Package of 3	\$1,800

WHAT IS PRP?

PRP stands for Platelet Rich Plasma this is a substance drawn from your blood and injected into your scalp that can help heal bodily tissues, including follicles from which your hairs grow. PRP is extracted from your blood using a centrifuge-like mechanism that can separate the substance from your blood and increase the concentration of specific proteins that promote healing.

HOW DOES IT WORK?

PRP therapy is a three-step process. Most PRP therapy requires three treatments 4–6 weeks apart.

STEP 1

Your blood is drawn — typically from your arm — and put into a centrifuge (a machine that spins rapidly to separate fluids of different densities).

STEP 2

After about 10 minutes in the centrifuge, your blood will have separated into in three layers:

- platelet-poor plasma
- platelet-rich plasma
- red blood cells

STEP 3

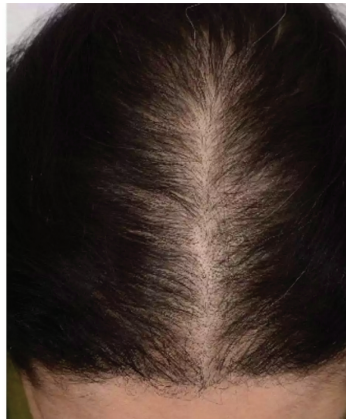

The platelet-rich plasma is drawn up into a syringe and then injected into areas of the scalp that need increased hair growth.

The first round of treatments takes a few visits to see initial results.

After your initial treatments it is recommended to receive touch up treatments once a year to maintain new hair growth. Schedule a consult now to see if you are a good candidate for PRP hair restoration.
